For the transition period from _____ to

Commission file number 000-25711

EXTREME NETWORKS, INC.

(Exact name of Registrant as
specified in its charter)

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES
EXCHANGE ACT OF 1934

For the quarter ended October 3, 1999 OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES
EXCHANGE ACT OF 1934

Registrant's telephone number,
including area code: (408) 579-2800

Indicate by check mark

whether the Registrant (1) has filed all reports required to be
filed by Section 13 or 15(d) of the Securities Exchange Act of 1934
during the preceding 12 months (or for such shorter period that the
Registrant was required to file such reports), and (2) has been
subject to such filing requirements for the past 90 days.

The number of shares of the
Registrant's Common Stock, \$.001 par value, outstanding at

November 1, 1999 was 53,419,754

EXTREME NETWORKS, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

1. BASIS OF PRESENTATION

The condensed consolidated financial statements have been prepared by Extreme Networks, Inc., pursuant to the rules and regulations of the Securities and Exchange Commission and include the accounts of Extreme Networks, Inc. and its wholly-owned subsidiaries ("Extreme" or collectively, the "Company"). Certain information and footnote disclosures, normally included in financial statements prepared in accordance with generally accepted accounting principles, have been condensed or omitted pursuant to such rules and regulations. In the opinion of the Company, the unaudited financial statements reflect all adjustments, consisting only of normal recurring adjustments, necessary for a fair presentation of the financial position at September 30, 1999 and the operating results and cash flows for the three months ended September 30, 1999 and September 30, 1998. The condensed balance sheet at June 30, 1999 has been derived from audited financial statements as of that date. These financial statements and notes should be read in conjunction with the Company's audited consolidated financial statements and notes thereto for the year ended June 30, 1999, included in the Company's Form 10-K filed with the Securities and Exchange Commission.

The results of operations for the three months ended September 30, 1999 are not necessarily indicative of the results that may be expected for the future quarters or the fiscal year ending June 30, 2000. Certain items previously reported in specific financial statement captions have been reclassified to conform to the 2000 presentation.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Nature of Operations

Extreme was incorporated in California on May 8, 1996 and was reincorporated in

Delaware on March 31, 1999. The Company is a leading provider of a next generation of switching solutions that meet the increasing needs of enterprise local area networks, or LANs, internet service providers and content providers. We have not achieved profitability on an annual basis and although our revenue has grown in recent quarters, we cannot be certain that we will realize sufficient revenue to achieve profitability on an annual basis. Extreme incurred net losses of \$7.9 million from inception through June 30, 1997, \$13.9 million for fiscal 1998 and \$1.6 million for fiscal 1999. As of September 30, 1999, we had an accumulated deficit of \$19.4 million.

Fiscal Year

Effective July 1, 1999, Extreme changed its fiscal year from June 30th to a 52/53-week fiscal accounting year. The September 30, 1999 quarter closed on October 3, 1999 and comprised 13 weeks of revenue and expense activity.

Principles of Consolidation

The consolidated financial statements include the accounts of Extreme and its wholly-owned subsidiaries. All significant inter-company balances and transactions have been eliminated. Assets and liabilities of foreign operations are translated to U.S. dollars at current rates of exchange, and revenues and expenses are translated using weighted average rates. Foreign currency transaction gains and losses have not been material. Gains and losses from foreign currency translation are included as a separate component of comprehensive income.

Accounting Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that materially affect the amounts reported in the financial statements. Actual results could differ materially from these estimates.

Cash Equivalents and Short-Term Investments

Extreme considers all highly liquid investment securities with maturity from date of purchase of three months or less to be cash equivalents and investment securities with maturity from date of purchase of more than three months but less than one year, to be short-term investments.

Management determines the appropriate classification of debt and equity securities at the time of purchase and reevaluates this designation as of each balance sheet date. To date, all marketable securities have been classified as available-for-sale and are carried at fair value, with unrealized gains and losses, when material, reported net-of-tax as a separate component of comprehensive income. Realized gains and losses on available-for-sale securities are included in interest income. The cost of securities sold is based on specific identification. Premiums and discounts are amortized over the period from acquisition to maturity and are included in investment income, along with interest and dividends.

Inventories

Inventories consist of raw materials and finished goods and are stated at the lower of cost or market (on a first-in, first-out basis).

Inventories
consist of:

	Three Months Ended	
	September 30, 1999	September 30, 1998
Operating activities:		
Net income (loss)	\$ 4,047	\$ (2,982)

Finished goods	2,990	1,926
Total	<u>\$ 4,761</u>	<u>\$ 2,626</u>

Concentration of Credit Risk, Product and Significant Customers

Financial

instruments that potentially subject Extreme to concentration of credit risk consist principally of marketable investments and accounts receivable. Extreme has placed its investments with high-credit quality issuers. Extreme will not invest an amount exceeding 10% of the corporation's combined cash, cash equivalent, short-term and long-term investments, in the securities of any one obligor or maker, except for obligations of the United States, obligations of United States agencies and money market accounts. Extreme sells its products primarily to United States corporations in the technology marketplace. Extreme performs ongoing credit evaluations of its customers and generally does not require collateral. To date, credit losses have been immaterial and within management's expectations. Extreme operates solely within one business segment, the development and marketing of enterprise switching solutions. Significant customer concentration is summarized below. No other customer accounts for more than 10% of Extreme's net revenues.

Revenue Recognition

Extreme generally recognizes product revenue at the time of shipment, unless Extreme has future obligations for installation or has to obtain customer acceptance, in which case revenue is deferred until these obligations have been satisfied. Amounts billed in excess of revenue recognized are included as deferred revenue in the accompanying consolidated balance sheets. Extreme has established a program which, under specified conditions, enables third party resellers to return products to us. The amount of potential product returns is estimated and provided for in the period of the sale. Revenue from service obligations is recognized ratably over

the term of the contract period,

which is typically 12 months. The Company makes certain sales to partners in two-tier distribution channels. These customers are generally given privileges to return a portion of inventory and participate in various cooperative marketing programs. The Company defers recognition of revenue on such sales until the product is sold by the distributors and also maintains appropriate accruals and allowances for all other programs.

Upon shipment of products to its customers, Extreme provides for the estimated cost to repair or replace products that may be returned under warranty. Extreme's warranty period is typically 12 months from the date of shipment to the end user.

Foreign Operations

Extreme's foreign offices consist of sales, marketing and support activities through its foreign subsidiaries and an overseas reseller network. Operating income generated by the foreign operations of Extreme and their corresponding identifiable assets were not material in any period presented.

Extreme's export sales represented 42% and 45% of net revenue in the three months ended September 30, 1999 and September 30, 1998, respectively. All of the export sales to date have been denominated in U.S. dollars and were derived from sales to Europe and Asia.

Net Income (Loss) Per Share

Basic net income (loss) per share and diluted net income (loss) per share are

presented in conformity with Financial Accounting Standards Board's ("FASB") Statement of Financial Accounting Standards (SFAS)

No. 128, "Earnings Per Share," for all periods presented.

Basic net income (loss) was computed by dividing income available to common shareholders by the weighted-average number of common shares outstanding for the period ended September 30, 1999. Diluted net income (loss) reflects the potential dilution that would occur from any instrument or options, which could result in the issuance of additional common shares.

In accordance with SFAS No. 128, proforma basic and diluted net income (loss) per share have been computed using the weighted-average number of shares of common stock outstanding during the period ended September 30, 1998, less shares subject to repurchase for the period ended September 30, 1998. Basic and diluted pro forma net income (loss) per share also gives effect to the conversion of the convertible preferred stock (using the if-converted method) from the original date of issuance.

The following table presents the calculation of basic and diluted and pro forma basic and diluted net income (loss) per common share (unaudited in thousands, except per share data):

	<u>Three Months Ended</u>	
	<u>September 30, 1999</u>	<u>September 30, 1998</u>
Customer		
Allied Telesis KK	-	11%
Compaq	23%	18%
Hitachi Cable	11%	-
Tokyo Electron Ltd	-	14%
		Three Months Ended September 30, 1999 1998
		(Unaudited)
Net income (loss)		\$ 4,047 \$ (2,982)
Weighted-average shares of common stock outstanding		49,385 11,619
Less: Weighted-average shares subject to repurchase		(2,359) (5,169)
Weighted-average shares used in computing basic net income (loss) per common share		47,026 6,450
Incremental shares using the treasury stock method		6,557 —
Weighted-average shares used in computing diluted net income (loss) per common share		53,583 6,450
Basic net income (loss) per common share		\$ 0.09 \$ (0.46)

Recently Issued Accounting Standard

In June 1997, the FASB issued SFAS No. 131, "Disclosures about Segments of an

Enterprise and Related Information" effective for financial statements for periods beginning after December 15, 1997. SFAS No. 131 establishes standards for the way that public business enterprises report financial and descriptive information about reportable operating segments in annual financial statements and interim financial reports issued to shareholders. SFAS No. 131 supersedes SFAS No. 14, "Financial Reporting for Segments of a Business Enterprise," but retains the requirement to report information about major customers. Extreme adopted FAS 131 effective for its fiscal year ending June 30, 1999. Extreme has determined that it has a single reportable segment. Management uses one measurement of profitability and does not disaggregate its business for internal reporting.

In March 1998, the American Institute of Certified Public Accountants issued SOP 98-1, "Accounting for the Costs of Computer Software Developed or Obtained for Internal Use." SOP 98-1 requires that entities capitalize certain costs related to internal use software once certain criteria have been met. Extreme implemented SOP 98-1 for the year ending June 30, 2000. Adoption of SOP 98-1 had no material impact on Extreme's financial condition or results of operations.

In June 1998, the FASB issued SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities." Extreme is required to adopt SFAS No. 133 for the fiscal year ending June 30, 2002. SFAS No. 133 establishes methods of accounting for derivative financial instruments and hedging activities related to those instruments as well as other hedging activities. Because Extreme currently holds no derivative financial instruments and does not currently engage in hedging activities, adoption of SFAS No. 133 is expected to have no material impact on Extreme's financial condition or results of operations.

3. COMMITMENTS

Extreme had outstanding purchase order commitments for materials of approximately \$25.7 million and \$26.4 million at September 30, 1999 and June 30, 1999, respectively. Extreme expects these purchase orders to be fulfilled and the related invoices to be paid in fiscal year 2000. Of the \$25.7 million outstanding at September 30, 1999, the Company has accrued and expensed approximately \$0.3 million of the outstanding purchase order commitments for materials due to obligations to suppliers as of September 30, 1999. This expense is included within cost of revenue for the three months ended September 30, 1999.

Facility Lease

In February 1999, Extreme agreed to lease 77,000 square feet to house its primary facility in Santa Clara, California. The related cost of this lease is approximately \$120,000 per month. The lease expires in December 2002. Extreme commenced occupancy in March 1999.

4. INCOME TAXES

The Company has recorded a tax provision of \$1.7 million for the three months ended September 30, 1999. The provision for income taxes consists primarily of foreign taxes, state income taxes and federal alternative minimum taxes.

FASB Statement No. 109 provides for the recognition of deferred tax assets if realization of such assets is more likely than not. Based upon the weight of available evidence, which includes the Company's

historical operating performance and the reported cumulative net losses in all prior years, the Company has provided a full valuation allowance against its net deferred tax assets. The Company will continue to evaluate the realizability of the deferred tax assets on a quarterly basis.

5. COMPREHENSIVE INCOME (LOSS)

Extreme adopted SFAS No. 130, "Reporting Comprehensive Income" at December 31, 1998. SFAS 130 establishes new rules for the reporting and display of comprehensive income and its components; however, it had no impact on the Company's net income (loss) or stockholders' equity. SFAS 130 requires unrealized gains or losses on the Company's available-for-sale securities and foreign currency translation adjustments to be included in other comprehensive income. Prior to adoption of SFAS 130, the Company had no unrealized gains or losses on available-for-sale securities or foreign currency translation adjustments.

The following are the components of accumulated other comprehensive loss, net of tax (in thousands):

Diluted net income (loss) per common share	\$ 0.08	\$ (0.46)
<hr/>		
Pro forma:		
Net income (loss)		\$ (2,982)
<hr/>		
Shares used above		6,450
Pro forma adjustment to reflect weighted effect of assumed conversion of convertible preferred stock		29,061
<hr/>		
Shares used in computing pro forma basic net income(loss) per common share (unaudited)		35,511
<hr/>		
Shares used in computing pro forma diluted net income (loss) per common share (unaudited)		35,511
<hr/>		
Pro forma basic net income (loss) per common share (unaudited)		\$ (0.08)
<hr/>		
Pro forma diluted net income (loss) per common share (unaudited)		\$ (0.08)
<hr/>		

The following schedule of other comprehensive income shows the gross current-period gain (loss) and the reclassification adjustment (in thousands):

	Three Months Ended	
	September 30, 1999	September 30, 1998
	<hr/>	<hr/>
Unrealized loss on investments	\$ (129)	\$ -
Foreign currency translation adjustments	21	-
<hr/>		
Accumulated other comprehensive loss	\$ (108)	\$ -
<hr/>		

6. SECONDARY PUBLIC OFFERING

On September 29, 1999, the Company filed a registration statement with the Securities and Exchange Commission for a proposed public offering of 6.5 million shares of common stock. On October 20, 1999, the Company announced the completion of the public offering of approximately 7.5 million shares (including the underwriters' over-allotment provision) of its common stock at a price of \$77.00 per share. Of these shares, the Company sold 2,372,708 shares and existing stockholders sold 5,102,292 shares. The Company raised approximately \$175 million net of offering costs.

Part I. Financial Information

Item 2. Management's Discussion and Analysis of

Financial Condition and Results of Operations

When used in this discussion and elsewhere in this Form 10-Q, the words "may," "should," "believes," "expects," "anticipates," "estimates" and similar expressions are intended to identify forward-looking statements. Such statements, which include statements concerning the availability and functionality of products under development, product mix, pricing trends, the mix of export sales, sales to significant customers and the availability and cost of products from the Company's suppliers, are subject to risks and uncertainties, including those set forth below under "Factors That May Affect Our Results." Our actual results could differ materially from those projected in these forward-looking statements which could have a material adverse effect on our business, operating results and financial condition. These forward-looking statements speak only as of the date hereof and there may be events in the future that we are not able to predict accurately or over which we have no control.

The following information should be read in conjunction with the "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the Company's annual report on Form 10 - K for the fiscal year ended June 30, 1999.

Overview

From our inception in May 1996 through September 1997, our operating activities related primarily to developing a research and development organization, testing prototype designs, building an ASIC design infrastructure, commencing the staffing of our marketing, sales and field service and technical support organizations, and establishing relationships with resellers and OEMs. We commenced volume shipments of our Summit1 and Summit2, the initial products in our Summit stackable product family, in October 1997, and we began shipping our BlackDiamond modular product family in September 1998. Since inception, we have incurred significant losses and as of September 30, 1999, we had an accumulated deficit of \$19.4 million.

Our revenue is derived primarily from sales of our Summit and BlackDiamond product families and fees for services relating to our products, including maintenance and training. The level of sales to any customer may vary from period to period; however, we expect that significant customer concentration will continue for the foreseeable future. See

"Factors That May Affect Our Results-If a Key Reseller, OEM or Other Significant Customer Cancels or Delays a Large Purchase, Extreme's Revenues May Decline and the Price of Its Stock May Fall." Significant customer concentration as a percentage of net revenue is summarized below:

	<u>Three Months Ended</u>	
	<u>September 30, 1999</u>	<u>September 30, 1998</u>
Unrealized gain (loss) on investments:		
Unrealized loss on available-for-sale securities	\$(41)	\$ -
Less: reclassification adjustment for gain realized in net income	24	-
Net unrealized loss on investments	(17)	-
Foreign currency translation adjustments	27	-
Other comprehensive income	\$ 10	\$ -

We market and sell our products primarily through resellers and, to a lesser extent, OEMs and our field sales organization. We sell our products through more than 140 resellers in 40 countries. In the three months ended September 30, 1999, sales to customers outside of North America accounted for approximately 42% of our net revenue. Currently, all of our international sales are denominated in U.S. dollars. We generally recognize product revenue at the time of shipment, unless we have future obligations for installation or have to obtain customer acceptance, in which case revenue is deferred until such obligations have been satisfied. We have established a program which, under specified conditions, enables third party resellers to return products to us. The amount of potential product returns is estimated and provided for in the period of the sale. Service revenue is recognized ratably over the term of the contract period, which is typically 12 months.

We expect to experience rapid erosion of average selling prices of our products due to a number of factors, including competitive pricing pressures, promotional pricing and rapid technological change. Our gross margins will be affected by such declines and by fluctuations in manufacturing volumes, component costs and the mix of product configurations sold. In addition, our gross margins may fluctuate due to the mix of distribution channels through which our products are sold, including the potential effects of our development of a two-tier distribution channel. We generally realize higher gross margins on sales to resellers than on sales through our OEMs. Any significant decline in sales to our OEMs or resellers, or the loss of any of our OEMs or resellers could materially adversely affect our business, operating results and financial condition. In addition, new product introduction may result in excess or obsolete inventories. Any excess or obsolete inventories may also reduce our gross margins.

We outsource the majority of our manufacturing and supply chain management operations, and we conduct quality assurance, manufacturing engineering, documentation control and repairs at our facility in Santa Clara, California. Accordingly, a significant portion of our cost of revenue consists of payments to our contract manufacturers,

Flextronics and MCMS. We expect to realize lower per unit product costs as a result of volume efficiencies. However, we cannot assure you when or if such price reductions will occur. The failure to obtain such price reductions could materially adversely affect our gross margins and operating results.

Research and development expenses consist principally of salaries and related personnel expenses, consultant fees and prototype expenses related to the design, development, testing and enhancement of our ASICs and software. We expense all research and development expenses as incurred. We believe that continued investment in research and development is critical to attaining our strategic objectives and, as a result, we expect these expenses to increase in absolute dollars in the future.

Selling and marketing expenses consist of salaries, commissions and related expenses for personnel engaged in marketing, sales and field service support functions, as well as trade shows and promotional expenses. We intend to pursue selling and marketing campaigns aggressively and therefore expect these expenses to increase significantly in absolute dollars in the future. In addition, we expect to substantially expand our field sales operations to support and develop leads for our resellers, which would also result in an increase in selling and marketing expenses.

General and administrative expenses consist primarily of salaries and related expenses for executive, finance and administrative personnel, recruiting expenses, professional fees and other general corporate expenses. We expect general and administrative expenses to increase in absolute dollars as we add personnel, increase spending on our information systems and incur additional costs related to the growth of our business and operation as a public company.

During fiscal 1998, in connection with the grant of certain stock options to employees, we recorded deferred stock compensation of \$437,000 representing the difference between the exercise price and the deemed fair value of our common stock on the date such stock options were granted. Such amount is included as a reduction of stockholders' equity and is being amortized by charges to operations on a graded vesting method. We recorded amortization of deferred stock compensation expense of approximately \$35,000, \$172,000 and \$68,000 for the three months ended September 30, 1999 and the years ended June 30, 1999 and 1998, respectively. At September 30, 1999, we had a total of approximately \$162,000 remaining to be amortized over the corresponding vesting period of each respective option, generally four years. The amortization expense relates to options awarded to employees in all operating expense categories.

Despite growing revenues, we have only been profitable for the last three fiscal quarters. Our net losses have not decreased proportionately with the increase in our revenue primarily because of increased expenses relating to our growth in operations. Because of the lengthy sales cycle of our products, there is often a significant delay between the time we incur expenses and the time we realize the related revenue. See "Factors That May Affect Our Results-The Sales Cycle for Extreme's Products is Long and Extreme May Incur Substantial Non-Recoverable Expenses or Devote Significant Resources to Sales that Do Not Occur When Anticipated." To the extent that future revenues do not increase significantly in the same periods in which operating expenses

increase, our operating results would be adversely affected. See "Factors That May Affect Our Results -A

Number of Factors Could Cause Extreme's Quarterly Financial Results to Be Worse Than Expected, Resulting in a Decline in Its Stock Price.

"

Results of Operations

The following table sets forth for the periods indicated certain financial data as a percentage of net revenue:

	Three Months Ended	
	September 30, 1999	September 30, 1998
Customer		
Allied Telesis KK	-	11%
Compaq	23%	18%
Hitachi Cable	11%	-
Tokyo Electron Ltd.	-	14%

Net revenue.

Net revenue increased from \$12.9 million for the three months ended September 30, 1998 to \$47.2 million for the three months ended September 30, 1999, an increase of \$34.3 million. Net revenue increased primarily from increased sales of our Summit stackable products and our BlackDiamond modular product family.

North America

sales increased from \$7.0 million for the three months ended September 30, 1998 to \$27.3 million for the three months ended September 30, 1999, an increase of \$20.3 million. Sales outside North America increased from \$5.9 million for the three months ended September 30, 1998 to \$19.9 million for the three months ended September 30, 1999, an increase of \$14.0 million. The increases in North America sales and sales outside North America reflect the growth in demand for our Summit and BlackDiamond products and an increase in the number of resellers, offset in part by a decrease in OEM sales. We expect that export sales will continue to represent a significant portion of net revenue, although we cannot assure you that export sales as a percentage of net revenue will remain at current levels. All sales transactions are denominated in U.S. dollars.

Gross profit.

Gross profit increased from \$6.4 million for the three months ended September 30, 1998 to \$24.6 million for the three months ended September 30, 1999, an increase of \$18.2 million. Gross margins increased from 49.3% for the three months ended September 30, 1998 to 52.1% for the three months ended September 30, 1999. The increase in gross margin resulted primarily from reductions in component costs, improved manufacturing efficiencies and a shift in our channel mix from OEMs to resellers, but was offset in part by lower average selling prices due to increased competition.

Research and

development expenses. Research and development expenses increased from \$3.5 million for the three months ended September 30, 1998 to \$6.9 million for the three months ended September 30, 1999, an increase of \$3.4 million. The increase was primarily due to nonrecurring engineering and initial product verification expenses and the hiring of additional engineers.

Selling and

marketing expenses. Selling and marketing expenses increased from \$4.8 million for the three months ended September 30, 1998 to \$11.1 million for the three months ended September 30, 1999, an

increase of \$6.3 million. This increase was primarily due to the hiring of additional sales, marketing and customer support personnel, increased commission expenses resulting from higher sales, tradeshow and promotional expenses, and the establishment of new sales offices.

General and administrative expenses. General and administrative expenses increased from \$1.2 million for the three months ended September 30, 1998 to \$2.5 million for the three months ended September 30, 1999, an increase of \$1.3 million. This increase was due primarily to the hiring of additional finance, information technology and legal and administrative personnel and professional fees.

Interest and other income, net. Interest and other income, net increased from \$0.2 million for the three months ended September 30, 1998 to \$1.7 million for the three months ended September 30, 1999, an increase of \$1.5 million. The increase was due to increased interest income earned as a result of the increased amount of cash and cash equivalents, short-term investments and long-term investments from the net proceeds we received from our initial public offering in April 1999.

Provision for income taxes. We incurred significant operating losses for all fiscal years from inception through June 30, 1999. We recorded an effective tax rate of 30% for the three months ended September 30, 1999. The provision for income taxes consists primarily of foreign taxes, state income taxes and federal alternative minimum taxes. Our effective tax rate is lower than the combined federal and state statutory rates primarily due to the utilization of net operating loss carryforwards and other credit carryforwards offset by the impact of foreign taxes. FASB Statement No. 109 provides for the recognition of deferred tax assets if realization of such assets is more likely than not. Based upon the weight of available evidence, which includes our historical operating performance and the reported cumulative net losses in all prior years, we have provided a full valuation allowance against our net deferred tax assets as the future realization of the tax benefit is not sufficiently assured. We intend to evaluate the realizability of the deferred tax assets on a quarterly basis.

Liquidity and Capital Resources

At September 30, 1999, we had \$109.7 million in cash and cash equivalents, \$6.8 million in short-term investments and \$26.9 million in long-term investments. We have primarily financed our operations through the sale of equity securities. We completed our initial public offering of approximately 8 million common shares (including the underwriters' over-allotment provision) in April 1999 and raised approximately \$125.3 million net of offering costs. On October 20, 1999, the Company announced the completion of the public offering of approximately 7.5 million shares (including the underwriters' over-allotment provision) of its common stock at a price of \$77.00 per share. Of these shares, the Company sold 2,372,708 shares and existing stockholders sold 5,102,292 shares. The Company raised approximately \$175 million net of offering costs.

Cash provided by operating activities was \$7.5 million for the three months ended September 30, 1999, as compared to cash used for operating activities of \$7.6 million for the three months ended September 30, 1998. The increase was primarily due to net income, depreciation and increases in accrued warranty, deferred revenue and income taxes payable, offset by increases in accounts receivable, inventories and other current and noncurrent assets. We expect that accounts receivable will continue to increase to the extent our revenues

continue to rise. Any such increase can be expected to reduce cash, cash equivalents and short-term investments.

Investing

activities used cash of \$6.4 million for the three months ended September 30, 1999 due to capital expenditures of \$5.2 million and net purchases of investments of \$1.2 million. Our investing activities used cash of \$2.1 million for the three months ended September 30, 1998 for purchases of investments of \$1.1 million, and capital expenditures of \$1.0 million.

Financing

activities provided cash of \$1.5 million for the three months ended September 30, 1999, arising primarily from proceeds from the issuance and sale of common stock, partially offset by principal payments on capital lease obligations. Financing activities used cash of \$0.3 million for the three months ended September 30, 1998, primarily from principal payments on notes payable and capital lease obligations, partially offset by the issuance and sale of stock.

We have a revolving line of credit for \$5.0 million with Silicon Valley Bank. Borrowings under this line of credit bear interest at the bank's prime rate. As of September 30, 1999, there were no outstanding borrowings under this line of credit. We also have a capital equipment line with Silicon Valley Bank for \$4.0 million. Borrowings under this capital equipment line bear interest at the bank's prime rate. This agreement requires that we maintain certain financial ratios and levels of tangible net worth, profitability and liquidity. We were in compliance with the financial statement covenants as of September 30, 1999. As of September 30, 1999, there were no outstanding borrowings under this capital equipment line. In addition, we have a \$2.0 million capital equipment line with Comdisco, Inc. As of September 30, 1999, there were no outstanding borrowings under this capital equipment line.

In February 1999, we agreed to lease a 77,000 square foot facility in Santa Clara, California. The related cost of this lease is expected to be approximately \$120,000 per month. The lease has a term of 47 months.

We require substantial capital to fund our business, particularly to finance inventories and accounts receivable and for capital expenditures. In order to build a sustainable business, we expect to use cash in our operations over the next several quarters. We are working toward a business model that will allow us to consistently generate cash from operations. Achieving this model will depend on many factors, including the rate of revenue growth, the timing and extent of spending to support product development efforts and expansion of sales and marketing, the timing of introductions of new products and enhancements to existing products, and market acceptance of our products. As a result, we could be required to raise substantial additional capital. To the extent that we raise additional capital through the sale of equity or convertible debt securities, the issuance of such securities could result in dilution to existing stockholders. If additional funds are raised through the issuance of debt securities, these securities may have rights, preferences and privileges senior to holders of common stock and the term of such debt could impose restrictions on our operations. We cannot assure you that such additional capital, if required, will be available on acceptable terms, or at all. If we are unable to obtain such additional capital, we may be required to reduce the scope of our planned product development and marketing efforts, which would materially adversely affect our business, financial condition and operating results.

We believe that our current cash and cash equivalents, short-term investments and cash available from credit facilities and future operations will enable us to meet our working capital requirements for at least the next 12 months.

Year 2000 Readiness Disclosure

Some computers, software and other equipment include computer code in which calendar year data is abbreviated to only two digits. As a result of this design decision, some of these systems could fail to operate or fail to produce correct results if "00" is interpreted to mean 1900, rather than 2000. These problems are widely expected to increase in frequency and severity as the year 2000 approaches, and are commonly referred to as the "year 2000 problem."

Assessment.

The year 2000 problem affects the computers, software and other equipment that we use, operate or maintain for our operations. Accordingly, we have organized a program team responsible for monitoring the assessment and remediation status of our year 2000 projects and reporting such status to our board of directors. This program team has assessed the potential effect and costs of remediating the year 2000 problem for our internal systems. To date, we have not obtained verification or validation from any independent third parties of our processes to assess and correct any of our year 2000 problems or the costs associated with these activities.

Internal

infrastructure. We have identified and evaluated approximately 250 personal computers and servers, six software applications, including Microsoft Windows 95, Microsoft Office 97 and Outlook 98 and Microsoft Mail Server, and our enterprise resource planning system, and related equipment used in connection with our internal operations to determine if they must be modified, upgraded or replaced to minimize the possibility of a material disruption to our business. We have commenced the process of modifying, upgrading,

and replacing major systems that have been assessed as adversely affected, and expect to complete this process before the occurrence of any material disruption of our business.

Systems other

than information technology systems. In addition to computers and related systems, the operation of office and facilities equipment, such as fax machines, telephone switches, security systems, and other common devices may be affected by the year 2000 problem. To date, we have been able to correct any problems with our systems other than information technology systems relating to year 2000. We currently do not expect any significant problems to arise with our systems other than information technology systems relating to the year 2000.

Products and

software programs. We have tested and intend to continue to test all of our products and software programs for year 2000 problems. To date, we have been able to correct any problems with our products and software programs relating to year 2000 prior to releasing them to our customers. We currently do not expect any significant problems to arise with our products and software programs relating to the year 2000.

We estimate the total cost to us of completing any required modifications, upgrades or replacements of our internal systems will not exceed \$200,000,

almost all of which we believe will be incurred during calendar 1999. This estimate is being monitored and we will revise it, as additional information becomes available.

Based on the activities described above, we do not believe that the year 2000 problem will have a material adverse effect on our business or operating results. In addition, we have not deferred any material information technology projects as a result of our year 2000 problem activities.

Suppliers.

We are checking the web sites of third-party suppliers of components used in the manufacture of our products to determine if these suppliers are certifying that the components they provide us are year 2000 compliant. To date, we believe all critical components that we obtain from third party suppliers are year 2000 compliant, except that Microsoft has not indicated that Windows 95 and its office mail programs is year 2000 compliant. We expect that we will be able to resolve any significant year 2000 problems with Microsoft and any other third-party suppliers of components; however, there can be no assurance that these suppliers will resolve any or all year 2000 problems before the occurrence of a material disruption to the operation of our business. Any failure of these third parties to timely resolve year 2000 problems with their systems could have a material adverse effect on our business, operating results and financial condition.

Most likely

consequences of year 2000 problems. We expect to identify and resolve all year 2000 problems that could materially adversely affect our business operations. However, we believe that it is not possible to determine with complete certainty that all year 2000 problems affecting us have been identified or corrected. The number of devices that could be affected and the interactions among these devices are simply too numerous. In addition, no one can accurately predict how many year 2000 problem-related failures will occur or the severity, duration, or financial consequences of these perhaps inevitable failures. As a result, we believe that the following consequences are possible:

	Three Months Ended	
	September, 1999	September 30, 1998
	-----	-----
Net revenue	100.0%	100.0%
Cost of revenue	47.9	50.7
	-----	-----
Gross profit	52.1	49.3
	-----	-----
Operating expenses:		
Research and development	14.6	27.4
Selling and marketing	23.4	37.0
General and administrative	5.4	9.4
	-----	-----
Total operating expenses	43.4	73.8
	-----	-----
Operating income (loss)	8.7	(24.5)
Interest and other income, net	3.6	1.4
	-----	-----
Income (loss) before income taxes	12.3	(23.1)
Provision for income taxes	3.7	-
	-----	-----

Contingency plans. We have developed contingency plans to be implemented if our efforts to identify and correct year 2000 problems affecting our internal systems are not effective. Depending on the systems affected, these plans could include:

- a significant number of operational inconveniences and inefficiencies for us, our contract manufacturers and our customers that will divert management's time and attention and financial and human resources from ordinary business activities;
- several business disputes and claims for pricing adjustments or penalties due to year 2000 problems by our customers, which we believe will be resolved in the ordinary course of business; and
- a few serious business disputes alleging that we failed to comply with the terms of contracts or industry standards of performance, some of which could result in litigation or contract termination.
- accelerated replacement of affected equipment or software;

Our implementation of any of these contingency plans could have a material adverse effect on our business, operating results and financial condition.

Disclaimer.

The discussion of our efforts and expectations relating to year 2000 compliance are forward-looking statements. Our ability to achieve year 2000 compliance and the level of incremental costs associated therewith, could be adversely affected by, among other things, the availability and cost of programming and testing resources, third party suppliers' ability to modify proprietary software, and unanticipated problems identified in the ongoing compliance review.

Factors That May Affect Our Results

Extreme Has a General History of Losses, and Limited History of Profitability and Cannot Assure You that it Will Continue to Achieve Profitability

We have not achieved profitability on an annual basis and although our revenue has grown in recent quarters, we cannot be certain that we will realize sufficient revenue to achieve profitability on an annual basis. Extreme has incurred net losses of \$7.9 million from inception through June 30, 1997, \$13.9 million for fiscal 1998 and \$1.6 million for fiscal 1999. As of September 30, 1999, we had an accumulated deficit of \$19.4 million. We anticipate continuing to incur significant sales and marketing, product development and general and administrative expenses and, as a result, we will need to generate significantly higher revenue to sustain profitability. Although our revenues have grown in recent quarters and we have recently achieved quarterly profitability, we cannot be certain that we will continue to realize sufficient revenue to sustain profitability.

A Number of Factors Could Cause Extreme's Quarterly Financial Results to Be Worse Than Expected, Resulting in a Decline in Its Stock Price

We plan to significantly increase our operating expenses to expand our sales and marketing activities, broaden our customer support capabilities,

develop new distribution channels, fund increased levels of research and development and build our operational infrastructure. We base our operating expenses on anticipated revenue trends and a high percentage of our expenses are fixed in the short term. As a result, any delay in generating or recognizing revenue could cause our quarterly operating results to be below the expectations of public market analysts or investors, which could cause the price of our common stock to fall.

We may experience a delay in generating or recognizing revenue because of a number of reasons. Orders at the beginning of each quarter typically do not equal expected revenue for that quarter and are generally cancelable at any time. Accordingly, we are dependent upon obtaining orders in a quarter for shipment in that quarter to achieve our revenue objectives. In addition, the timing of product releases, purchase orders and product availability could result in significant product shipments at the end of a quarter. Failure to ship these products by the end of a quarter may adversely affect our operating results. Furthermore, our customer agreements typically provide that the customer may delay scheduled delivery dates and cancel orders within specified time frames without significant penalty.

Our quarterly revenue and operating results have varied significantly in the past and may vary significantly in the future due to a number of factors, including:

- short to medium-term use of backup equipment and software;
- increased work hours for our personnel; and
- use of contract personnel to correct on an accelerated schedule any year 2000 problems that arise or to provide manual workarounds for information systems.
- fluctuations in demand for our products and services, including seasonality, particularly in Asia and Europe;
- unexpected product returns or the cancellation or rescheduling of significant orders;

Due to the foregoing factors, we believe that period-to-period comparisons of our operating results should not be relied upon as an indicator of our future performance.

Intense Competition in the Market for Networking Equipment Could Prevent Extreme From Increasing Revenue and Prevent Extreme From Sustaining Profitability

The market for internet switches is intensely competitive. Our principal competitors include Cabletron Systems, Cisco Systems, Foundry Networks, Lucent Technologies, Nortel Networks, and 3Com. Many of our current and potential competitors have longer operating histories and substantially greater financial, technical, sales, marketing and other resources, as well as greater name recognition and larger installed customer bases, than we do. These competitors may have developed or could in the future develop new technologies that compete with our products or even render our products obsolete.

To remain competitive, we believe we must, among other things, invest significant resources in developing new products and enhancing our current products and maintaining customer satisfaction. If we fail to do so, our products may not compete favorably with those of our competitors and our revenue and future profitability could be materially adversely affected.

Extreme Expects the Average Selling Prices of Its Products to Decrease Rapidly Which May Reduce Gross Margins or Revenue

The network equipment industry has experienced rapid erosion of average selling prices due to a number of factors, including competitive pricing pressures and rapid technological change. We may experience substantial period-to-period fluctuations in future operating results due to the erosion of our average selling prices. We anticipate that the average selling prices of our products will decrease in the future in response to competitive pricing pressures, increased sales discounts, new product introductions by us or our competitors, including, for example, competitive products manufactured with low cost merchant silicon, or other factors. Therefore, to maintain our gross margins, we must develop and introduce on a timely basis new products and product enhancements and continually reduce our product costs. Our failure to do so would cause our revenue and gross margins to decline, which could materially adversely affect our operating results and cause the price of our common stock to decline.

Extreme's Market is Subject to Rapid Technological Change and to Compete, Extreme Must Continually Introduce New Products that Achieve Broad Market Acceptance

The network equipment market is characterized by rapid technological change, frequent new product introductions, changes in customer requirements and evolving industry standards. If we do not address these changes by regularly introducing new products, our product line will become obsolete. Developments in routers and routing software could also significantly reduce demand for our product. Alternative technologies could achieve widespread market acceptance and displace Ethernet technology on which our product lines and

architecture are based. We cannot assure you that our technological approach will achieve broad market acceptance or that other technologies or devices will not supplant our approach.

When we announce new products or product enhancements that have the potential to replace or shorten the life cycle of our existing products, customers may defer purchasing our existing products. These actions could materially adversely affect our operating results by unexpectedly decreasing sales, increasing our inventory levels of older products and exposing us to greater risk of product obsolescence. The market for switching products is evolving and we believe our ability to compete successfully in this market is dependent upon the continued compatibility and interoperability of our products with products and architectures offered by other vendors. In particular, the networking industry has been characterized by the successive introduction of new technologies or standards that have dramatically reduced the price and increased the performance of switching equipment. To remain competitive we need to introduce products in a timely manner that incorporate or are compatible with these new technologies as they emerge. For example, this fiscal year we expect to ship new products that will incorporate a new chipset we are currently developing, we cannot assure you that these new products will be commercially successful. We have experienced delays in releasing new products and product enhancements in the past which delayed sales and resulted in lower quarterly revenue than anticipated. We may experience similar delays in product development in the future and any delay in product introduction could adversely affect our ability to compete and cause

our operating results to be below our expectations or the expectations of public market analysts or investors.

Continued Rapid Growth Will Strain Extreme's Operations and Will Require Extreme to Incur Costs to Upgrade Its Infrastructure

Since the introduction of our product line, we have experienced a period of rapid growth and expansion which has placed, and continues to place, a significant strain on our resources. Unless we manage such growth effectively, we may make mistakes in operating our business such as inaccurate sales forecasting, incorrect material planning or inaccurate financial reporting, which may result in unanticipated fluctuations in our operating results. Our net revenue increased significantly during the last year, and from September 30, 1998 to September 30, 1999, the number of our employees increased from 137 to 317. We expect our anticipated growth and expansion to strain our management, operational and financial resources. Our management team has had limited experience managing such rapidly growing companies on a public or private basis. To accommodate this anticipated growth, we will be required to:

- our ability to develop, introduce, ship and support new products and product enhancements and manage product transitions;
- announcements and new product introductions by our competitors;
- our ability to develop and support customer relationships with service providers and other potential large customers;
- our ability to achieve required cost reductions;
- our ability to obtain sufficient supplies of sole or limited sourced components for our products;
- unfavorable changes in the prices of the components we purchase;
- our ability to attain and maintain production volumes and quality levels for our products;
- the mix of products sold and the mix of distribution channels through which they are sold; and
- costs relating to possible acquisitions and integration of technologies or businesses.

We may not be able to install adequate control systems in an efficient and timely manner, and our current or planned personnel systems, procedures and controls may not be adequate to support our future operations. For example, in the quarter ended June 30, 1998, our operating results were adversely impacted due to a provision of approximately \$900,000 that we recorded for purchase order commitments for certain components that exceeded our estimated requirements at the end of that quarter. This was due primarily to an engineering change in certain of our Summit family of products and a reduced demand forecast from one of our customers. In August 1998, we installed a new management information system, which we may continue to modify and improve to meet the increasing needs associated with our growth. The difficulties associated with installing and implementing these new systems, procedures and controls may place a significant burden on our management and our internal resources. In addition, as we grow internationally, we will have to expand our worldwide operations and enhance our communications infrastructure. Any delay in the implementation of such new or enhanced systems, procedures or controls, or any disruption in the transition to such new or

enhanced systems, procedures or controls, could adversely affect our ability to accurately forecast sales demand, manage our supply chain and record and report financial and management information on a timely and accurate basis.

Extreme Must Develop and Expand Its Indirect Distribution Channels to Increase Revenues and Improve Its Operating Results

Our distribution strategy focuses primarily on developing and expanding indirect distribution channels through resellers and, to a lesser extent, original equipment manufacturers, or OEMs, as well as expanding our field sales organization. If we fail to develop and cultivate relationships with significant resellers, or if these resellers are not successful in their sales efforts, sales of our products may decrease and our operating results would suffer. Many of our resellers also sell products that compete with our products. We are developing a two-tier distribution structure in Europe and the United States which has and will require us to enter into agreements with a small number of stocking distributors. We have recently entered into three two-tier distribution agreements; however, we cannot assure you that we will continue to be able to enter into additional distribution agreements or that we will be able to successfully manage the transition of resellers to a two-tier distribution channel. Our failure to do so could limit our ability to grow or sustain revenue. In addition, our operating results will likely fluctuate significantly depending on the timing and amount of orders from our resellers. We cannot assure you that our resellers will market our products effectively or continue to devote the resources necessary to provide us with effective sales, marketing and technical support.

In order to support and develop leads for our indirect distribution channels, we plan to expand our field sales and support staff significantly. In addition, we need to continue to develop our field sales and support staff to expand our direct sales efforts to service providers and content providers. We cannot assure you that this internal expansion will be successfully completed, that the cost of this expansion will not exceed the revenues generated or that our expanded sales and support staff will be able to compete successfully against the significantly more extensive and well-funded sales and marketing operations of many of our current or potential competitors. Our inability to effectively establish our distribution channels or manage the expansion of our sales and support staff would materially adversely affect our ability to grow and increase revenue.

Because Substantially All of Extreme's Revenue is Derived From Sales of Two Product Families, Extreme is Dependent on Widespread Market Acceptance of These Products; Future Performance will Depend on the Introduction and Acceptance of New Products

We currently derive substantially all of our revenue from sales of our Summit and BlackDiamond product families. We expect that revenue from these product families will account for a substantial portion of our revenue for the foreseeable future. Accordingly, widespread market acceptance of our product families is critical to our future success. Factors that may affect the market acceptance of our products include market acceptance of switching products, and Gigabit Ethernet and Layer 3 switching technologies in particular in the enterprise, service provider and content provider markets, the performance, price and total cost of ownership of our products, the availability and price of competing products and technologies, and the success and development of our resellers, OEMs and field sales channels. Many of these factors are beyond our control. Our future performance will also depend on the successful development,

introduction and market acceptance of new and enhanced products that address customer requirements in a cost-effective manner. We are developing products which we expect to introduce this fiscal year which are based on a new chip set under development. The introduction of new and enhanced products may cause our customers to defer or cancel orders for existing products. We have in the past experienced delays in product development and such delays may occur in the future. Therefore, to the extent customers defer or cancel orders in the expectation of any new product release, any delay in development or introduction could cause our operating results to suffer. Failure of our existing or future products to maintain and achieve widespread levels of market acceptance may significantly impair our revenue growth.

If a Key Reseller, OEM or Other Significant Customer Cancels or Delays a Large Purchase, Extreme's Revenues May Decline and the Price of Its Stock May Fall

To date, a limited number of resellers, OEMs and other customers have accounted for a significant portion of our revenue. If any of our large customers stop or delay purchases, our revenue and profitability would be adversely affected. For the quarter ended September 30, 1998, Allied Telesis KK, Compaq and Tokyo Electron Ltd. accounted for 11%, 18% and 14% of our net revenue, respectively, and for the quarter ended September 30, 1999, Compaq and Hitachi Cable accounted for 23% and 11% of our net revenue, respectively. Compaq is both an OEM and an end-user customer. Because our expense levels are based on our expectations as to future

revenue and to a large extent are fixed in the short term, a substantial reduction or delay in sales of our products to, or the loss of any significant reseller, OEM or other customer, or unexpected returns from resellers could harm our business, operating results and financial condition. Although our largest customers may vary from period-to-period, we anticipate that our operating results for any given period will continue to depend to a significant extent on large orders from a small number of customers, particularly in light of the high sales price per unit of our products and the length of our sales cycles.

While our financial performance depends on large orders from a few key resellers, OEMs and other significant customers, we do not have binding commitments from any of them. For example:

- improve existing and implement new operational, information and financial systems, procedures and controls;
- hire, train and manage additional qualified personnel, including in the near future sales and marketing personnel; and
- effectively manage multiple relationships with our customers, suppliers and other third parties.

We have established a program which, under specified conditions, enables some third party resellers to return products to us. The amount of potential product returns is estimated and provided for in the period of the sale. Some of our OEM agreements also provide manufacturing rights and access to our source code upon the occurrence of specified conditions of default. If we were to default on these agreements, our OEMs could use our source code to develop and manufacture competing products, which would negatively affect our performance and ability to compete.

The Sales Cycle for Extreme's Products is Long and Extreme May Incur Substantial Non-Recoverable Expenses or

Devote Significant Resources to Sales that Do Not Occur When Anticipated

The timing of our sales revenue is difficult to predict because of our reliance on indirect sales channels and the length and variability of our sales cycle. Our products have a relatively high sales price per unit, and often represent a significant and strategic decision by an enterprise regarding its communications infrastructure. Accordingly, the purchase of our products typically involves significant internal procedures associated with the evaluation, testing, implementation and acceptance of new technologies. This evaluation process frequently results in a lengthy sales process, typically ranging from three months to longer than a year, and subjects the sales cycle associated with the purchase of our products to a number of significant risks, including budgetary constraints and internal acceptance reviews. The length of our sales cycle also may vary substantially from customer to customer. While our customers are evaluating our products and before they may place an order with us, we may incur substantial sales and marketing expenses and expend significant management effort. Consequently, if sales forecasted from a specific customer for a particular quarter are not realized in that quarter, we may be unable to compensate for the shortfall, which could harm our operating results.

Extreme Purchases Several Key Components for Products From Single or Limited Sources and Could Lose Sales if These Sources Fail to Fill Its Needs

We currently purchase several key components used in the manufacture of our products from single or limited sources and are dependent upon supply from these sources to meet our needs. Certain components such as gigabit interface converter transceivers, or GBICs, have been and may in the future be in short supply. While we have been able to meet our needs to date, we are likely to encounter shortages and delays in obtaining these or other components in the future which could materially adversely affect our ability to meet customer orders. Our principal sole sourced components include:

- our service provider and enterprise network customers can stop purchasing and our resellers and OEMs can stop marketing our products at any time;
- our reseller agreements generally are not exclusive and are for one year terms, with no obligation of the resellers to renew the agreements;
- our reseller agreements provide for discounts based on expected or actual volumes of products purchased or resold by the reseller in a given period; and
- our reseller and OEM agreements generally do not require minimum purchases.
- ASICs;

We use a rolling six-month forecast based on anticipated product orders to determine our material requirements. Lead times for materials and components we order vary significantly, and depend on factors such as the specific supplier, contract terms and demand for a component at a given time. If orders do not match forecasts, we may have excess or inadequate inventory of certain materials and components, which could materially adversely affect our operating results and financial condition. From time to time we have experienced shortages and allocations of certain components, resulting in delays in filling orders. In addition, during the development of our products we have experienced delays in the prototyping of our ASICs, which in turn has led to delays in product introductions.

Extreme Needs to Expand Its Manufacturing Operations and Depends on Contract Manufacturers for Substantially All of Its Manufacturing Requirements

If the demand for our products grows, we will need to increase our material purchases, contract manufacturing capacity and internal test and quality functions. Any disruptions in product flow could limit our revenue, adversely affect our competitive position and reputation and result in additional costs or cancellation of orders under agreements with our customers.

We rely on third party manufacturing vendors to manufacture our products. We currently subcontract substantially all of our manufacturing to two companies -- Flextronics International, Ltd., located in San Jose, California, MCMS, Inc., located in Boise, Idaho. We have experienced a delay in product shipments from a contract manufacturer in the past, which in turn delayed product shipments to our customers. We may in the future experience similar or other problems, such as inferior quality and insufficient quantity of product, any of which could materially adversely affect our business and operating results. There can be no assurance that we will effectively manage our contract manufacturers or that these manufacturers will meet our future requirements for timely delivery of products of sufficient quality and quantity. We intend to regularly introduce new products and product enhancements, which will require that we rapidly achieve volume production by coordinating our efforts with those of our suppliers and contract manufacturers. The inability of our contract manufacturers to provide us with adequate supplies of high-quality products or the loss of either of our contract manufacturers would cause a delay in our ability to fulfill orders while we obtain a replacement manufacturer and would have a material adverse effect on our business, operating results and financial condition.

As part of our cost-reduction efforts, we will need to realize lower per unit product costs from our contract manufacturers as a result of volume efficiencies. However, we cannot be certain when or if such price reductions will occur. The failure to obtain such price reductions would adversely affect our gross margins and operating results.

If Extreme Loses Key Personnel or is Unable to Hire Additional Qualified Personnel as Necessary, It May Not Be Able to Successfully Manage Its Business or Achieve Its Objectives

Our success depends to a significant degree upon the continued contributions of our key management, engineering, sales and marketing and manufacturing personnel, many of whom would be difficult to replace. In particular, we believe that our future success is highly dependent on Gordon Stitt, Chairman, President and Chief Executive Officer, Stephen Haddock, Vice President and Chief Technical Officer, and Herb Schneider, Vice President of Engineering. We neither have employment contracts with nor key person life insurance on any of our key personnel.

We believe our future success will also depend in large part upon our ability to attract and retain highly skilled managerial, engineering, sales and marketing, finance and manufacturing personnel. Competition for these personnel is intense, especially in the San Francisco Bay Area, and we have had difficulty hiring employees in the timeframe we desire, particularly software engineers. There can be no assurance that we will be successful in attracting and retaining such personnel. The loss of the services of any of our key

personnel, the inability to attract or retain qualified personnel in the future or delays in hiring required personnel, particularly engineers and sales personnel, could make it difficult for us to manage our business and meet key objectives, such as product introductions, on time. In addition, companies in the networking industry whose employees accept positions with competitors frequently claim that competitors have engaged in unfair hiring practices. We have from time to time received claims like this from other companies and, although to date they have not resulted in material litigation, we cannot assure you that we will not receive additional claims in the future as we seek to hire qualified personnel or that such claims will not result in material litigation. We could incur substantial costs in defending ourselves against any such claims, regardless of the merits of such claims.

Extreme's Products Must Comply With Evolving Industry Standards and Complex Government Regulations or Its Products May Not Be Widely Accepted, Which May Prevent Extreme From Sustaining Its Revenues or Achieving Profitability.

The market for network equipment products is characterized by the need to support industry standards as different standards emerge, evolve and achieve acceptance. We will not be competitive unless we continually introduce new products and product enhancements that meet these emerging standards. In the past, we have introduced new products that were not compatible with certain technological changes, and in the future we may not be able to effectively address the compatibility and interoperability issues that arise as a result of technological changes and evolving industry standards. In addition, in the United States, our products must comply with various regulations and standards defined by the Federal Communications Commission and Underwriters Laboratories. Internationally, products that we develop may be required to comply with standards established by telecommunications authorities in various countries as well as with recommendations of the International Telecommunication Union. If we do not comply with existing or evolving industry standards or if we fail to obtain timely domestic or foreign regulatory approvals or certificates we would not be able to sell our products where these standards or regulations apply, which may prevent us from sustaining our revenues or achieving profitability.

Extreme Needs to Expand Its Sales and Support Organizations to Increase Market Acceptance of Its Products and If It Fails to Do So, Extreme Will Not Be Able to Increase Revenues

Our products and services require a sophisticated sales effort targeted at several levels within a prospective customer's organization. Unless we expand our sales force we will not be able to increase revenues. We have recently expanded our sales force and plan to hire additional sales personnel. However, competition for qualified sales personnel is intense, and we might not be able to hire the kind and number of sales personnel we are targeting.

We currently have a small customer service and support organization and will need to increase our staff to support new customers and the expanding needs of existing customers. The design and installation of networking products can be complex; accordingly, we need highly trained customer service and support personnel particularly for large service provider and enterprise network customers. Hiring customer service and support personnel is very competitive in our industry due to the limited number of people available with the necessary technical skills and understanding of our products.

Extreme Depends Upon International Sales for Much of Its Revenue and Extreme's Ability to Sustain and Increase Its International Sales Depends on Successfully Expanding Its International Operations

Our ability to grow will depend in part on the expansion of international sales and operations which have and are expected to constitute a significant portion of our sales. Sales to customers outside of North America accounted for approximately 42% and 45% of our net revenue in the three months ended September 30, 1999 and September 30, 1998, respectively. Our international sales primarily depend on our resellers and OEMs. The failure of our resellers and OEMs to sell our products internationally would limit our ability to sustain and grow our revenue. In addition, there are a number of risks arising from our international business, including:

- microprocessors;
- programmable integrated circuits;
- selected other integrated circuits;
- cables; and
- custom-tooled sheet metal.

Our principal limited sourced components include:

- flash memories;
- dynamic and static random access memories, commonly known as DRAMs and SRAMs, respectively; and
- printed circuit boards

Our international sales currently are U.S. dollar-denominated. As a result, an increase in the value of the U.S. dollar relative to foreign currencies could make our products less competitive in international markets. In the future, we may elect to invoice some of our international customers in local currency which will subject us to fluctuations in exchange rates between the U.S. dollar and the particular local currency. If we do so, we may determine to engage in hedging transactions to minimize the risk of such fluctuations. However, if we are not successful in managing such hedging transactions, we could incur losses from hedging activities. Because we currently denominate sales in U.S. dollars, we do not anticipate that the adoption of the Euro as a functional legal currency of certain European countries will materially affect our business.

Extreme May Engage in Future Acquisitions that Dilute the Ownership Interests of Our Stockholders, Cause Us to Incur Debt and Assume Contingent Liabilities

As part of our business strategy, we review acquisition and strategic investment prospects that would complement our current product offerings, augment our market coverage or enhance our technical capabilities, or that may otherwise offer growth opportunities. While we have no current agreements or negotiations underway with respect to any such material acquisitions, we are reviewing investments in new businesses and we may acquire businesses, products or technologies

in the future. In the event of any future acquisitions, we could:

- longer accounts receivable collection cycles;
- difficulties in managing operations across disparate geographic areas;
- difficulties associated with enforcing agreements through foreign legal systems;
- payment of operating expenses in local currencies, which subjects us to risks of currency fluctuations;
- import or export licensing requirements;
- potential adverse tax consequences; and
- unexpected changes in regulatory requirements.

These actions by us could materially adversely affect our operating results and/or the price of our common stock. Acquisitions and investment activities also entail numerous risks, including:

- issue equity securities which would dilute current stockholders' percentage ownership;
- incur substantial debt; or
- assume contingent liabilities.
- difficulties in the assimilation of acquired operations, technologies or products;
- unanticipated costs associated with the acquisition or investment transaction;
- diversion of management's attention from other business concerns;
- adverse effects on existing business relationships with suppliers and customers;

We cannot assure you that we will be able to successfully integrate any businesses, products, technologies or personnel that we might acquire in the future, and our failure to do so could materially adversely affect our business, operating results and financial condition.

Extreme May Need Additional Capital to Fund Its Future Operations Which, If It Is Not Available When Needed, Extreme May Need to Reduce Its Planned Development and Marketing Efforts, Which May Reduce Its Revenues and Prevent Extreme From Achieving Profitability

We believe that our existing working capital, proceeds from the initial public offering in April 1999, proceeds from the secondary offering in October 1999 and cash available from credit facilities and future operations will enable us to meet our working capital requirements for at least the next 12 months. However, if cash from future operations is insufficient, or if cash is used for acquisitions or other currently unanticipated uses, we may need additional capital. The development and marketing of new products and the expansion of reseller and distribution channels and associated support personnel is expected to require a significant commitment of resources. In addition, if the market for Layer 3 switches were to develop more slowly than anticipated or if we fail to establish significant market share and achieve a meaningful level of revenues, we may continue to utilize significant amounts of capital. As a result, we

could be required to raise substantial additional capital. To the extent that we raise additional capital through the sale of equity or convertible debt securities, the issuance of such securities could result in dilution to existing stockholders. If additional funds are raised through the issuance of debt securities, such securities may have rights, preferences and privileges senior to holders of common stock and the term of such debt could impose restrictions on our operations. We cannot assure you that such additional capital, if required, will be available on acceptable terms, or at all. If we are unable to obtain such additional capital, we may be required to reduce the scope of our planned product development and marketing efforts, which would harm our business, financial condition and operating results.

If Extreme's Products Contain Undetected Software or Hardware Errors, Extreme Could Incur Significant Unexpected Expenses and Lost Sales

Network products frequently contain undetected software or hardware errors when first introduced or as new versions are released. We have experienced such errors in the past in connection with new products and product upgrades. We expect that such errors will be found from time to time in new or enhanced products after commencement of commercial shipments. These problems may materially adversely affect our business by causing us to incur significant warranty and repair costs, diverting the attention of our engineering personnel from our product development efforts and causing significant customer relations problems.

Our products must successfully interoperate with products from other vendors. As a result, when problems occur in a network, it may be difficult to identify the source of the problem. The occurrence of hardware and software errors, whether caused by our products or another vendor's products, could result in the delay or loss of market acceptance of our products and any necessary revisions may result in the incurrence of significant expenses. The occurrence of any such problems would likely have a material adverse effect on our business, operating results and financial condition.

Extreme's Limited Ability to Protect Its Intellectual Property May Adversely Affect Its Ability to Compete

We rely on a combination of patent, copyright, trademark and trade secret laws and restrictions on disclosure to protect our intellectual property rights. However, we cannot assure you that the actions we have taken will adequately protect our intellectual property rights.

We also enter into confidentiality or license agreements with our employees, consultants and corporate partners, and control access to and distribution of our software, documentation and other proprietary information. Despite our efforts to protect our proprietary rights, unauthorized parties may attempt to copy or otherwise obtain and use our products or technology.

If Extreme or Its Key Suppliers and Customers Fail to Be Year 2000 Compliant, Extreme's Business May Be Severely Disrupted And Its Revenues May Decline

The year 2000 computer issue creates a risk for us. If systems do not correctly recognize date information when the year changes to 2000, there could be an adverse impact on our operations. The risk exists in four areas:

- risks associated with entering markets in which we have no or limited prior experience; and

- potential loss of key employees of acquired organizations.

We are currently evaluating our exposure in all of these areas.

We are conducting an inventory and evaluation of the information systems used to run our business. Systems which have been and may be identified as non-compliant have been or will be upgraded or replaced. For the year 2000 non-compliance issues identified to date, the cost of remediation is not expected to be material to our operating results. However, if implementation of replacement systems is delayed, or if significant new non-compliance issues are identified, our operating results or financial condition could be materially adversely affected.

We are checking the websites of our suppliers to determine if these suppliers are certifying that the components they provide us are year 2000 compliant. To date, we believe all critical components that we obtain from third party suppliers are year 2000 compliant, except that Microsoft has not indicated that Windows 95 and its office mail programs is year 2000 compliant. We expect that we will be able to resolve any significant year 2000 problems with Microsoft and any other third-party suppliers of components; however, there can be no assurance that these suppliers will resolve any or all year 2000 problems before the occurrence of a material disruption to the operation of our business. Any failure of these third parties to timely resolve year 2000 problems with their systems could have a material adverse effect on our business, operating results and financial condition.

Since all customer situations cannot be anticipated, we may see an increase in warranty and other claims as a result of the year 2000 transition. In addition, litigation regarding year 2000 compliance issues is expected to escalate. For these reasons, the impact of customer claims could have a material adverse impact on our operating results or financial condition.

Businesses that face year 2000 compliance issues may require significant hardware and software upgrades or modifications to their computer systems and applications. These companies may plan to devote a substantial portion of their information systems' spending to fund such upgrades and modifications and divert spending away from networking solutions. This change in customers' spending patterns could materially adversely impact our business, operating results or financial condition.

Provisions in Extreme's Charter or Agreements May Delay or Prevent a Change of Control

Provisions in our certificate of incorporation and bylaws may delay or prevent a change of control or changes in our management. These provisions include:

- potential warranty or other claims from our customers;
- systems we use to run our business;
- systems used by our suppliers; and
- the potential reduced spending by other companies on networking solutions as a result of significant information systems spending on year 2000 remediation.

- the right of the board of directors to elect a director to fill a vacancy created by the expansion of the board of directors;
- the ability of the board of directors to alter our bylaws without getting stockholder approval; and
- the requirement that at least 10% of the outstanding shares are needed to call a special meeting of stockholders.

Furthermore, we are subject to the provisions of section 203 of the Delaware General Corporation Law. These provisions prohibit large stockholders, in particular those owning 15% or more of the outstanding voting stock, from consummating a merger or combination with a corporation unless this stockholder receives board approval for the transaction or 66 2/3% of the shares of voting stock not owned by the stockholder approve the merger or combination. Further, we have investor agreements with Compaq, Siemens and 3Com which require us to give these companies notice if we receive an acquisition offer or if we intend to pursue one.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Interest Rate Sensitivity

The primary objective of our investment activities is to preserve principal while at the same time maximizing the income we receive from our investments without significantly increasing risk. Some of the securities that we have invested in may be subject to market risk. This means that a change in prevailing interest rates may cause the principal amount of the investment to fluctuate. For example, if we hold a security that was issued with a fixed interest rate at the then-prevailing rate and the prevailing interest rate later rises, the principal amount of our investment will probably decline. To minimize this risk, we maintain our portfolio of cash equivalents and short-term investments in a variety of securities, including commercial paper, other non-government debt securities and money market funds. In general, money market funds are not subject to market risk because the interest paid on such funds fluctuates with the prevailing interest rate. The following table presents the amounts of our cash equivalents, short-term investments and long-term investments that are subject to market risk by range of expected maturity and weighted-average interest rates as of September 30, 1999. This table does not include money market funds because those funds are not subject to market risk.

Exchange Rate Sensitivity

Currently, the majority of our sales and expenses are denominated in U.S. dollars and as a result, we have experienced no significant foreign exchange gains and losses to date. While we have conducted some transactions in foreign currencies during the three months ended September 30, 1999 and expect to continue to do so, we do not anticipate that

foreign exchange gains or losses will be significant. We have not engaged in foreign currency hedging activities to date, however, we may do so in the future.

PART II. Other Information

Item 1. Legal Proceedings - None

Item 2. Changes in Securities - None

Item 3. Defaults Upon Senior Securities - None

Item 4. Submission of Matters to a Vote of Security Holders - None

Item 5. Other Information - None

Item 6. Exhibits and Reports on Form 8-K

(a) Exhibits

27 Financial Data Schedule (filed only with the electronic submission of Form 10-Q in accordance with the Edgar requirements)

(b) Reports on Form 8-K

No reports on Form 8-K were filed by the Company during the three months ended September 30, 1999.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the Registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.
